EDUCATION

Digipen Institute of Technology | Redmond, WA

B.S. in Computer Science | GPA:

May 2025

Relevant Courses: Computer Environment , High-level Programming I & II, Operating Systems I , Computer Graphics I & II, Advanced C/C++ , Game Implementation Techniques , Data Structures

TECHNICAL SKILLS

Programming Languages: C++

Engines: Custom C++/OpenGL Engine

Interpersonal Skills: Quality-Driven, Innovative Problem Solver, Collaborative Partner, Adaptable, Solution-Oriented

ACADEMIC EXPERIENCE

Keimyung-DigiPen RTIS | Student Game Developer | DAEGU, SOUTH KOREA

MAR/2024 – Present

- Collaborated as a multidisciplinary developer in a rigorous game engineering program, successfully delivering 3~4 team-based projects by pivoting between Producer, Design Lead, and QA roles.
- Established and enforced Technical Art (TA) and Quality Assurance (QA) standards for the 'Rescook' project, resulting in enhanced software stability and optimized rendering pipelines across diverse hardware.
- Managed the end-to-end development lifecycle for multiple titles, coordinating between technical and creative workflows to ensure all project milestones were met on schedule.
- Executed low-level systems programming and hardware-specific optimization using C++ and custom engine architectures, improving game performance and input responsiveness for a seamless user experience.

PROJECTS

Forest NAGA | Producer

OCT/2024 ~ DEC/2024

- 2D Tower Defense with Auto-battler mechanics
- Collaborated with a team of 3 to deliver a polished gameplay experience using C++ and the raylib framework, serving as the primary bridge between design and technical implementation.
- Conceptualized the hybrid gameplay loop by successfully integrating Auto-battler elements—such as gacha-based recruitment and 3-unit merging logic—into a traditional Tower Defense structure.
- Authored the narrative and environmental theme, focusing on a unique theme (Nature vs Industry) conflict that visually and mechanically differentiates unit deployment and enemy wave progression.
- Successfully delivered all project milestones on schedule by orchestrating frequent team communication and streamlining coordination between creative and technical workflows, ensuring a cohesive user experience through effective resource management.

Dieski | Design Lead

MAR/2025 ~ JUN/2025

- 2D First-person skiing game inspired by classic raycasting titles
- Collaborated with a team of 4 to deliver a polished gameplay experience, assuming the Design Lead role to maintain project continuity and bridge artistic vision with technical execution.
- Designed the overall structure and navigation flow of the Setting menu system to ensure intuitive player control and interface consistency.
- Enhanced the low-level input handling framework to support hardware-specific Escape key mapping, resolving critical bugs in state management to ensure overall software stability.

- Assumed the Design Lead role to produce original 2D art and sound effects while optimizing the custom rendering pipeline for a consistent and responsive user experience.

Rescook | QA Engineer

SEPT/2025 ~ JUN/2026

- 2D Top-down Side-scrolling Action Cooking Game
- Collaborated with a team of 4 to deliver a polished gameplay experience, serving as the primary bridge between artistic vision and technical implementation.
- Architected the front-end menu systems and integrated dynamic UI components within the custom C++ engine.
- Identified and resolved critical bugs within the UI logic and rendering pipeline to enhance overall software stability.
- Achieved high software stability and optimized rendering performance

LEADERSHIP EXPERIENCE

DigiPen Institute of Technology | Multi-disciplinary Project Lead | Daegu, South Korea

- Managed end-to-end project roadmaps and facilitated team synchronization to ensure consistent milestone delivery across multiple team-based initiatives.
- Served as the primary bridge between technical and creative workflows, translating complex engineering constraints into actionable design goals for smoother collaboration.
- Delivered high-quality results across diverse roles: as a Producer (scheduling and risk management), a Design Lead (UI architecture and visual direction), and a TA/QA (pipeline optimization and software stability).
- Developed a holistic "big picture" perspective of the game development lifecycle, evolving into a versatile leader capable of overseeing projects from initial concept to final technical polish.
